Empathy Map

Project Name: Credit Card Approval Prediction using Machine Learning

Introduction

An empathy map is a user-centered design tool that helps understand the needs, expectations, behaviors, and emotions of the target user. For the **Credit Card Approval Prediction using Machine Learning** project, the primary user is a customer applying for a credit card. By understanding what the user says, thinks, does, and feels during the application process, the system can be designed to provide a more efficient, transparent, and user-friendly experience.

The empathy map helps identify customer concerns related to credit card approval, financial eligibility, and the uncertainty involved in the application process. These insights guide the development of a solution that addresses user expectations while supporting accurate and reliable decision-making.
