Customer Journey Map

Introduction

A Customer Journey Map visually represents the complete experience of a customer while interacting with the credit card approval prediction system. It helps identify customer actions, interactions, expectations, emotions, and opportunities for improvement throughout the application process. Understanding the customer journey enables the development of a user-friendly and efficient machine learning system that provides faster, transparent, and reliable credit card approval predictions.

The journey begins when the customer visits the application, continues through entering personal and financial information, and ends with receiving the prediction result. At every stage, the customer's needs and expectations are analyzed to improve the overall user experience.

Phase of Journey	Stage 1 (Visit Application)	Stage 2 (Enter Applicant Details)	Stage 3 (View Prediction Result)
Actions <i>What does the customer do?</i>	- Opens the website. - Reads project information. - Clicks "Start Prediction".	- Enters demographic and financial information. - Reviews the entered details. - Clicks the Predict button.	- Views the prediction result. - Understands approval status. - Uses the result for decision making.
Touchpoint <i>What part of the service do they interact with?</i>	- Home Page - Navigation Button - Project Description	- Prediction Form - Input Fields - Submit Button	- Result Page - Prediction Message - Predict Again Button
Customer Thought <i>What is the customer thinking?</i>	"Will this system help me?" "Is it easy to use?" "Can I trust the prediction?"	"I should provide accurate information." "Will my details remain secure?" "I hope my application is approved."	"The prediction was generated quickly." "This helps me understand my approval chances." "The process is simple and useful."
Customer Feeling <i>What is the customer feeling?</i>	- Curious - Interested - Hopeful	- Focused - Slightly anxious - Confident	- Satisfied if approved. - Motivated to improve eligibility if rejected. - Happy with the quick response.
Process Ownership <i>Who is in the</i>	User Interface (HTML/CSS)	Flask Backend + Input Processing	Machine Learning Model + Flask Result Page

Opportunities <i>How can we improve this stage?</i>	• Improve website design. • Add user guidance. • Provide FAQs.	• Add input validation. • Improve form usability. • Add tooltips and help messages.	• Display prediction confidence. • Explain reasons behind the prediction. • Provide recommendations to improve approval chances.
