

Project Executable Files

Date	03 July 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA (Database not used)
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	No (Runs locally)
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Project/

```

|
├── CreditCardApproval_ML/
|   |
|   ├── README.md
|   ├── ML.ipynb
|   ├── credit_card_approval_model.pkl
|   ├── scaler.pkl
|   ├── application_record.csv
|   ├── credit_record.csv
|   ├── credit_card_processed.csv
|   └── credit_card_final_dataset.csv
|
└── CreditCardApprovalApp/
    |
    ├── app.py
    ├── credit_card_approval_model.pkl
    ├── requirements.txt
    |
    ├── templates/
    |   ├── home.html
    |   ├── index.html
    |   └── result.html
    |
    └── static/
        └── style.css
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed (Runs on Localhost)

Login Credentials (Demo)	[Provide demo username and password for evaluator access]
Platform / Hosting Provider	Local Flask Development Server
Repository Link	
Demo Video Link	

Step 4: Run Instructions

Follow these steps to run the project locally:

1. Download or clone the project from the GitHub repository.
2. Open the project folder in **Visual Studio Code**.
3. Create and activate a Python virtual environment (optional but recommended).
4. Install the required libraries using:

```
pip install -r requirements.txt
```

5. Ensure that the trained model file (`model.pkl` or `credit_card_approval_model.pkl`) is present in the project folder.
6. Start the Flask application:

```
python app.py
```

7. Open a web browser and visit:

```
http://127.0.0.1:5000/
```

8. Click **Start Prediction**, enter the applicant details, and click **Predict** to view the credit card approval result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	The application is currently deployed only on the local machine.	Can be deployed to Render, Railway, or AWS in future versions.
2	Prediction is based only on the training dataset and selected features.	Accuracy can be improved by using larger and more diverse datasets.
3	The application does not provide explanations for prediction decisions.	Explainable AI techniques such as SHAP or LIME can be integrated in future work.
